

DIALOGUES

The design process between research and practice

seminario a cura di **Claudia Ricciardi**

Corso di **Theories of the Contemporary Research in Architecture**
Prof. **Maria Clara Ghia**

Six emerging architectural practices coming from different backgrounds will present their own projects through significant key-words, that will act as a critical means to unveil different design processes. The series of dialogues will serve as a common reflection to point out an heterogeneous scenario of architectural investigation, where the project is explored as an intersection of the theoretical research and the practical production.
